Tyn Myint-U Lokenath Debnath Linear Partial Differential

In mathematics, a partial differential equation (PDE) is a differential equation that contains beforehand unknown multivariable functions and their partial derivatives. PDEs are used to formulate problems involving functions of several variables, and are either solved by hand, or used to create a computer model. A special case is ordinary differential equations (ODEs), which deal with functions ...

The Laplace transform is a powerful integral transform used to switch a function from the time domain to the s-domain. The Laplace transform can be used in some cases to solve linear differential equations with given initial conditions. First consider the following property of the Laplace transform: $\{ \hat{a}^{\epsilon^2} \} = \{ \hat{a}^{\epsilon^3} \} = \{ \hat{a}^{\epsilon^2} \hat{a}^{\epsilon^3} \}$ One can prove by induction that
