Chemical biology is a scientific discipline spanning the fields of chemistry and biology. The discipline involves the application of chemical techniques, analysis, and often small molecules produced through synthetic chemistry, to the study and manipulation of biological systems. In contrast to biochemistry, which involves the study of the chemistry of biomolecules and regulation of biochemical ...

Ecological systems theory, also called development in context or human ecology theory, identifies five environmental systems with which an individual interacts. The theory offers a framework through which community psychologists examine individuals' relationships within communities and the wider society. Ecological systems theory was developed by Urie Bronfenbrenner.

1. INTRODUCTION - OVERVIEW - Biology as a science deals with the origin, history, process, and physical characteristics, of plants and animals: it includes botany, and zoology. A study of biology includes the study of the chemical basis of living organisms, DNA. Other related sciences include microbiology and organic

chemistry.

The front cover picture shows our desk as we were analyzing the repair of methylated nucleosides from tRNA. The white structure in the back is an L-shaped tRNA, for which we used nucleic acid isotope labeling coupled mass spectrometry, NAIL-MS, to distinguish enzymatic methylation from methylation damage in bacteria.
