Figure 7.1. (a) Dependence of solubility on salt concentration. Salting-in increases protein solubility at low salt concentrations. As salt concentration is increased further, proteins are salted-out. (b) Solubility of horse carboxyhemoglobin in the presence of sodium chloride, potassium chloride, magnesium sulfate and ammonium sulfate.

Salting out of Proteins Using Ammonium Sulfate Precipitation

Methods focuses on rapidly developing techniques in the experimental biological and medical sciences. Each topical issue, organized by a guest editor who is an expert in the area covered, consists solely of invited quality articles by specialist authors, many of them reviews.

Methods - Journal - Elsevier

Ammonium sulfate precipitation is one of the most commonly used methods for large and laboratory scale protein purification and fractionation that can be used to separate proteins by altering their solubility in the presence of a high salt concentration. Ammonium sulfate is an inorganic salt with a high solubility that disassociates into ammonium (NH_4^+) and sulfate (SO_4^{2-}) in aqueous ...

The point spread function (PSF) describes the response of an imaging system to a point source or point object. A more general term for the PSF is a system's impulse response, the PSF being the impulse response of a focused optical system. The PSF in many contexts can be thought of as the extended blob in an image that represents an unresolved object.

Abstract. We present for the first time a comparative analysis of blood and organ system data from trials with rats fed three main commercialized genetically modified (GM) maize (NK 603, MON 810, MON 863), which are present in food and feed in the world.

A Comparison of the Effects of Three GM Corn Varieties on
