

### **model driven development and pdf**

Model-driven engineering (MDE) is a software development methodology that focuses on creating and exploiting domain models, which are conceptual models of all the topics related to a specific problem. Hence, it highlights and aims at abstract representations of the knowledge and activities that govern a particular application domain, rather than the computing (i.e. algorithmic) concepts.

### **Model-driven engineering - Wikipedia**

Model-driven architecture (MDA) is a software design approach for the development of software systems. It provides a set of guidelines for the structuring of specifications, which are expressed as models. Model-driven architecture is a kind of domain engineering, and supports model-driven engineering of software systems. It was launched by the Object Management Group (OMG) in 2001.

### **Model-driven architecture - Wikipedia**

Model Driven Architecture (MDA) is a great way to manage complexity, achieve high levels of re-use and significantly reduce the development effort required on software development projects. With support for MDA built in, Enterprise Architect helps bridge the gap between the analysis and implementation.

Design, Evolution and Use of KernelF (Version 1.0, June 2018) KernelF is a functional language built on top of MPS. It is designed to be highly extensible and embeddable in order to support its use at the core of domain-specific languages, realising an approach we sometimes call Funclerative Programming.
