system identification • Model validation • Various control techniques • Nonlinear system control • Robotics • Mechatronic system modelling, identification and control • Biological system modelling, identification and control • Neural network, fuzzy logic enhanced modelling, identification and control

### **International journal of MODELLING, IDENTIFICATION AND CONTROL**

No other publication covers the three fundamental issues of robotics: modelling, identification and control. It covers the development of various mathematical models required for the control and simulation of robots.

"Identification" provides mechanisms to establish the models and "control" provides mechanisms to improve the system's (represented by its model) performance. IJMIC has been set up to reflect the relevant generic studies in this area.

### **International Journal of Modelling, Identification and Control**

The aim of MIC is to present Nordic research activities in the field of modeling, identification and control to the international scientific community. Historically, the articles published in MIC presented the results of research

carried out in Norway, or sponsored primarily by a Norwegian institution.

2 ANALYSIS AND DESIGN OF CONTROL SYSTEMS USING MATLAB An electric switch is a man-made control system controlling the electricity-flow. The simple act of pointing at an object with a finger requires a biological control system consisting chiefly of eyes, the arm, hand and finger and the brain of a person, where the input is precise-
