RESEARCH ARTICLES Enhancement of Critical Parameters of Natural Ester Liquids Using SiO₂ Insulating Nanoparticle M. Srinivasan, U. S. Ragupathy, and A. Raymon J. Comput. Theor.

American Scientific Publishers - Journal of Computational

Eutectic bonding, also referred to as eutectic soldering, describes a wafer bonding technique with an intermediate metal layer that can produce a eutectic system. Those eutectic metals are alloys that transform directly from solid to liquid state, or vice versa from liquid to solid state, at a specific composition and temperature without passing a two-phase equilibrium, i.e. liquid and solid state.

Eutectic bonding - Wikipedia

Volume 22, Number 12 (December 2016) pp.3981-4701 A SPECIAL SECTION Selected Peer-Reviewed Articles from the 2016 Advancement on Informatics, Business and Management

American Scientific Publishers - ADVANCED SCIENCE LETTERS

There are several ways to prepare quantum dots, the principal ones involving colloids. Colloidal synthesis. Colloidal semiconductor nanocrystals are synthesized from solutions, much like traditional chemical processes. The main difference is the product neither precipitates as a bulk solid nor remains dissolved. Heating the solution at high temperature, the precursors decompose forming monomers ...

2.Synthesis of morphological Cu₂O crystals with different architectures 2.1.Basic strategies for synthesis of faceted Cu₂O crystals. Faceted Cu₂O micro-/nanocrystals can be prepared by many synthetic methods, including wet-chemistry route (such as liquid reduction, hydrothermal and solvothermal synthesis), electrodeposition, sputtering, and irradiation technique .

Cuprous oxide (Cu₂O) crystals with tailored architectures

This report contains the collective views of international groups of experts and does not necessarily represent the decisions or the stated policy of the United Nations Environment Programme, the International Labour Organization, or the World Health Organization.

ARSENIC AND ARSENIC COMPOUNDS (EHC 224, 2001)

The mechanochemical method was proposed by Ao et al. [], they synthesized ZnO with an average crystallite size of 21 nm. The milling process was carried out for 6 h, producing ZnCO₃ as the zinc oxide precursor. Calcination of the precursor at 600 Å°C produced ZnO with a hexagonal structure.
